PT Antiallergic agent comprises peptide - contg. 28 amino acid units, is
PT active against e.g. bronchial asthma and hay fever.
XX
PS Claim 1; Page 1; 3pp; Japanese.
XX
CC The sequence given can be used as the active component in an antiallergic
CC agent. Vasoactive intestinal polypeptide (VIP) has chemical mediator
CC isolation-inhibiting action and is effective for therapy and prevention
CC of various allergic diseases, such as allergic rhinitus, bronchial
CC asthma, allergic asthma, hay fever, urticaria, eczema, atopic dermatitis
CC etc. Since it also has specific bronchial smooth muscle relaxant action,
CC it is esp. useful for treating and preventing bronchial and allergic
CC asthma. (Updated on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-
CC 2003 to correct PA field.)

PT New cyclic vasoactive intestinal peptide (VIP) analogues - are useful for
PT the treatment of bronchotracheal constructive disorders e.g. asthma.
XX
PS Disclosure; Page 65; 141pp; English.
XX
CC The sequence is that of porcine vasoactive intestinal peptide (VIP) as
CC claimed in EP-325044. The peptide sequence was used to design cyclic
CC analogues of VIP which have enhanced bronchodilation activity without any
CC observable side effects such as cardiovascular side effects. The
CC bronchodilation produced by the analogues can be sustained for more than
CC two hours. The analogues may be used for the treatment of bronchotracheal
CC constrictive disorders, e.g. asthma. See also RR3944-5016. (Updated on 25

PT   New nucleic acid complexes with cationic polymers - useful for genetic
PT   transformation of cells.
XX
PS   Claim 11; Page 43; 58pp; French.
XX
CC   In novel complexes of negatively-charged nucleic acids and positively-
CC   charged polymers, the polymers comprise monomer subunits bearing NH3+
CC   groups, at least 10% of which are replaced by uncharged amino groups
CC   bearing a substit. that has at least one -OH group and is not recognised
CC   by cell membrane receptors; the side-chain groups of the polymer (i.e.
CC   the NH3+ and/or OH groups) may be substd. by a group that is recognised
CC   by a cell membrane receptor, provided that at least 30% of the NH3+
CC   groups remain free. The complexes are useful for transfecting particular
CC   nucleic acid sequences into particular cell types, depending on the
CC   identity of the cell membrane receptor ligands involved, e.g. for gene
CC   therapy or prepn. of vaccines. Preferred ligands are oligoglycoside
CC   antigens recognised by lectins, natural metabolites (such as biotin,
CC   tetrahydrofolate, folic acid or carnitine) or peptides (pref. vasoactive

PT New modified form of vasoactive intestinal polypeptide - with C-terminal
PT substd. amide residue, has greater in vivo stability and persistence,
PT useful for treating asthma and impotence.
XX
PS Disclosure; Page 3; 16pp; English.
XX
CC This sequence represents vasoactive intestinal polypeptide (VIP). VIP is
CC a peptide hormone that shows smooth muscle relaxant activity. The
CC structure of VIP is similar to that of the other peptides in the glucagon
CC -secretin family, to which it belongs. VIP is present in the nervous
CC system and the digestive system tracts. It is also found in the lungs of
CC normal patients (however, it is not found in the lungs of people
CC suffering from bronchial asthma). The sequences shown in AAR83784 and
CC AAR83786 are analogues of this sequence. These analogues are found to be
CC resistant to protease digestion. The analogues can be used to treat
CC asthma (by inhalation) and impotence (percutaneously). Compared to
CC natural VIP, the analogue sequences have better in vivo stability. The
CC analogue sequences are also more persistent than natural VIP and have
CC excellent affinity for biological membranes

PT New glucagon decomposing enzyme, and DNA encoding it - for specifically
PT cleaving glucagon and vasoactive intestinal peptide, in the prevention
PT and treatment of diseases caused by excess glucagon and VIP.
XX
PS Claim 1; Page 2; 18pp; Japanese.
XX
CC A novel gene encoding a glucagon degrading enzyme (GDE; AAT11575) was
CC isolated from a human pancreatic carcinoma cell line HPC-Yo cDNA library.
CC The enzyme has a mol. wt. 83 kD, a pH optimum of 6.8 and catalyses the
CC cleavage of glucagon, vasoactive intestinal peptide and selectin
CC (AAR93022-4). The gene encoding the enzyme was isolated by screening the
CC library with an anti-GDE peptide antibody, amplifying the inserts with
CC the primers AAT18903-4 and probing the fragments with the probe AAT18905.
CC This screening resulted in the full length clone designated lambda GDE4-
CC 2. The coding region of the clone was subsequently PCR amplified by the
CC primers AAT11576-7 and inserted into the eukaryotic expression vector
CC pKDCR under control of the SV40 promoter for production of the protein in
CC COS-7 cells. The protein is useful in preventing and treating diseases
CC characterised by an excess of glucagon or vasoactive intestinal peptide

PT   New ligands for vasoactive intestinal peptide receptor - is useful for
PT   treating VIP-related disorders, e.g. asthma, tumours, myocardial
PT   infarction, stroke, inflammation or auto-immune disease.
XX
PS   Example 1; Page 18; 38pp; English.
XX
CC   This is the amino acid sequence of a vasoactive intestinal polypeptide
CC   (VIP) receptor. It has two distinct receptors with seven transmembrane
CC   helices named VIP-1 and VIP-2. The method of the invention involves the
CC   development of peptidic ligands that can be used in the treatment of
CC   bronchoconstrictive disorders, e.g. asthma, chronic obstructive pulmonary
CC   disease (COPD), tumours, myocardial infarctions, strokes, the
CC   regeneration of nerves as in post-traumatic injury, as anti-inflammatory
CC   and anti-oxidant agent, to increase cell growth, as immuno-modulation
CC   agent in the treatment of auto-immune diseases and for reducing side
CC   effects in organ transplantation. They can also be used for detection and
CC   diagnosis, e.g. for the identification of specific cancers such as breast
CC   and prostate cancers, lung cancers, ovarian cancers and colon cancers.
CC   The ligands can also be used for the identification of other ligands of
CC   the VIP1 receptor

PT New fluorescent protein sensors for detection of analytes - comprises a
PT binding protein moiety having an analyte binding region and bound donor
PT and acceptor fluorescent protein moieties.
XX
PS Disclosure; Page 21; 108pp; English.
XX
CC This peptide represents a target moiety from vasoactive intestinal
CC peptide that is recognised by calmodulin. The invention provides
CC fluorescent indicators and methods for using them to determine the
CC concentration of an analyte, such as calcium ion, in vitro and in vivo.
CC Fluorescent indicators include a binding protein moiety (e.g. calmodulin)
CC and donor and acceptor fluorescent protein moieties, preferably derived
CC from Aequorea green fluorescent protein (see AAW71645-48). The binding
CC protein preferably binds target peptides (see AAW71649-79) in addition to
CC the analyte. The target peptide moieties can be modified to enhance the
CC response of the fluorescent indicator to the analyte

PT   Cleavage of big endothelin or vasoactive intestinal peptide, useful for
PT   generating bioactive peptides (e.g. endothelin) from inactive precursor
PT   forms, comprises contacting with a recombinant or isolated Kell protein.
XX
PS   Disclosure; Col 10; 15pp; English.
XX
CC   The present invention relates to the cleavage of big endothelin 1, 2 and
CC   3 or vasoactive intestinal peptide (VIP) with Kell proteins. This
CC   cleavage is useful for generating bioactive endothelins from their
CC   inactive precursor forms. The method is also useful in developing
CC   therapeutic agents and screening assays. The proteolytic function of the
CC   Kell proteins can be used in the management and study of hypertension and
CC   cell differentiation and proliferation, e.g. in haematopoiesis and
CC   developmental process. VIP protein was cleaved by SF9 cell media infected
CC   with baculovirus containing recombinant soluble Kell cDNA's. The present
CC   sequence is cleavage product #1, this peptide consists of residues 1 to
CC   28 of the precursor VIP protein

PT Modifying and attaching therapeutic peptides to albumin prevents
PT peptidase degradation, useful for increasing length of in vivo activity.
XX
PS Disclosure; Page 347; 733pp; English.
XX
CC The present invention describes a modified therapeutic peptide (I)
CC comprising a therapeutically active amino acid region (III) and a
CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
CC a less therapeutically active amino acid region (IV), which covalently
CC bonds with amino/hydroxyl/thiol groups on blood components to form a
CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
CC factors and neurotransmitters, to protect them from peptidase activity in
CC vivo for the treatment of various disorders. Endogenous therapeutic
CC peptides are not suitable as drug candidates as they require frequent
CC administration due to rapid degradation by peptidases in the body.
CC Modifying and attaching therapeutic peptides to albumin prevents or
CC reduces the action of peptidases to increase length of activity (half
CC life) and specificity as bonding to large molecules decreases
CC intracellular uptake and interference with physiological processes.
CC AAB90829 to AAB92441 represent peptides which can be used in the

PT New vasoactive intestinal peptide analogs containing alpha, alpha-
PT dialkylated amino acids, useful in the treatment of cancer, and their
PT preparation.
XX
PS Disclosure; Page 1; 34pp; English.
XX
CC The invention relates to vasoactive intestinal peptide (VIP) analogs
CC containing alpha, alpha-dialkylated amino acids in a site specific
CC manner. The invention also relates to the synthesis of active VIP peptide
CC derivatives, which bind selectively to VIP receptors on target cells. The
CC invention encompasses methods for the generation of these peptides,
CC compositions containing the peptides and the pharmacological applications
CC of these peptides especially in the treatment and prevention of cancer.
CC The present sequence is vasoactive intestinal peptide (VIP) related to
CC the invention

PT Treating endotoxic shock, inflammation and autoimmune diseases, by
PT administering vasoactive peptides or pituitary adenylate cyclase
PT activating peptides.
XX
PS Claim 1; Page 3; 33pp; Spanish.
XX
CC The invention relates to the use of vasoactive intestinal peptide (VIP)
CC or pituitary adenylate cyclase activating peptide (PACAP) (or their
CC fragments and analogues) for preparing a composition for treating
CC endotoxic shock in mammals or inflammatory and autoimmune diseases
CC associated with activation of Th1 cells. This sequence corresponds to the
CC human VIP sequence. The peptide acts by inhibiting the production of
CC tumour necrosis factor (TNF) and interleukin-6 (IL-6) and for treating
CC inflammatory/autoimmune diseases, they inhibit Th1 cells, stimulate Th2
CC cells and increase production of IL-4 (an inhibitor of proinflammatory
CC cytokines). VIP and PACAP also modulate the capacity of antigen-
CC presenting cells (APC) to induce activation and differentiation of
CC lymphocytes. The VIP and PACAP peptides are used to treat endotoxic shock
CC and inflammatory and autoimmune diseases, e.g. rheumatoid arthritis,
CC multiple sclerosis, Crohn's disease and graft rejection

PT Novel pituitary adenylate cyclase activating peptide receptor 3 agonist
PT useful for treating type 2 diabetes, asthma, hypertension, ulcers and
PT cardiovascular diseases.
XX
PS Example 6; Page 22; 62pp; English.
XX
CC The present sequence is provided in a specification relating to pituitary
CC adenylate cyclase activating peptide (PACAP) receptor 3 (R3) agonist
CC polypeptides. The polypeptides stimulate insulin release from pancreatic
CC beta cells. They are useful for treating metabolic disorders such as type
CC 2 diabetes and the pre-diabetic state of impaired glucose tolerance. They
CC are useful for treating respiratory diseases and for stimulating insulin
CC release in a glucose-dependent manner. The R3 agonists are useful for
CC treating and/or preventing diseases and conditions such as diabetes,
CC asthma, hypertension, male reproduction problems including human sperm
CC motility, cardiovascular diseases and ulcers. They are useful in gene
CC therapy

PT Novel fluorescent proteins comprising a sensor protein inserted into
PT them, useful for measuring the response of a sensor biological, chemical,
PT electrical or physiological parameter in vivo or in vitro.
XX
PS Disclosure; Page 33; 94pp; English.
XX
CC The present sequence is a calmodulin-binding domain peptide used in the
CC construction of a fluorescent protein indicator. The indicator comprises
CC a sensor polypeptide that is responsive to a chemical, biological,
CC electrical or physiological parameter, and a fluorescence protein
CC functional group. The sensor polypeptide is operatively inserted into the
CC fluorescent moiety. The fluorescent indicator is useful for detecting the
CC presence of a response inducing member in a sample. The method involves
CC contacting the sample with the indicator and detecting a change in
CC fluorescence, in which a change is indicative of the effect of the
CC parameter on the sensor polypeptide. The novel fluorescent proteins are
CC advantageous due to their reduced size as compared to the FRET
CC (fluorescence resonance energy transfer)-based sensors

PT New radiolabeled vasoactive intestinal peptide analogs, useful for
PT radioimaging, radiodiagnostics and radiotherapy, particularly in the
PT treatment of cancer.
XX
PS Example 15; Page 1; 43pp; English.

```
XX
CC   The present invention relates to radiolabelled analogues of vasoactive
CC   intestinal peptide (VIP). VIP is a neuropeptide which shares homology
CC   with secretin, PHI and glucagon. The invention provides radiolabelled VIP
CC   analogues that selectively bind to the VIP receptor on target cells. The
CC   VIP analogues of the invention exhibit pharmacological activity and are
CC   useful as an imaging agent for visualising VIP-receptor tumours and
CC   metastases, and can be used as a radio-therapeutic agent for the
CC   treatment of cancer by specifically targeting tumour sites in mammals.
CC   The present sequence for porcine VIP is used in the methods of the
CC   present invention

PT   New conjugates of vasoactive intestinal peptide, somatostatin or
PT   neurotensin peptides and polymethine dyes are used for e.g. in-vivo
PT   fluorescence diagnosis of tumors and other diseased tissues.
XX
PS   Claim 7; Page 15; 32pp; German.
XX
CC   This invention describes novel conjugates (I) of vasoactive intestinal
CC   peptide (VIP), somatostatin or neurotensin peptides and polymethine dyes.
CC   The products of the invention can also be used for a diagnostic method
CC   comprising administering (I) to a patient, either intravenously or to the
CC   bronchi by inhalation or to the gastrointestinal tract, esophagus or
CC   bladder by spraying and then washing out excess (I), and then performing
CC   an endoscopic investigation by local excitation of fluorescence at an
CC   excitation wavelength of 350-1200 nm and site-specific detection of the
CC   fluorescence emitted by the dye. (I) are useful for in-vivo diagnosis of
CC   tumors, other diseased tissues or adenomas by means of optical detection
CC   procedures, in-vivo fluorescence diagnosis of tumors, tumor cells and/or
CC   inflammatory tissues by means of endoscopic procedures in the
CC   gastrointestinal tract, esophagus, bronchial tract, bladder or cervix or
CC   for in-vivo fluorescence and/or absorption diagnosis of breast tumors by
CC   means of optical mammography (transillumination or optical tomography of
CC   the breast). The peptide component provides receptor-specific binding to
CC   target tissues and the polymethine dye provides a fluorescence signal
CC   that is detectable with high sensitivity

PT   New antagonistic analogs of litoein and similar peptides, are useful for
PT   treating malignant or benign proliferation or gastrointestinal disorders.
XX
PS   Disclosure; Fig 3A; 29pp; English.
XX
CC   The present invention describes therapeutic peptides (A) or their salts
CC   of 7-10 amino acids (aa) that are analogues of the natural peptides,
CC   having C-terminal Met, litoein or the 10 aa C-terminal region of either
CC   mammalian gastrin-releasing peptide (GRP) or amphibian bombesin. (A) have
CC   cytostatic, antiarteriosclerotic, gastrointestinal, antidiabetic and
CC   ophthalmological activities and can be used as natural peptide
CC   antagonists. The peptide pyroGlu-Gln-Trp-Ala-Val-Gly-His-Leu-statine-NH2
CC   has IC50 for inhibition of binding of GRP to the bombesin receptor on 3T3
CC   cells of 150 nM and IC50 for inhibition of bombesin-stimulated
CC   incorporation of titrated thymidine into small cell lung cancer cells
CC   (NCI-H69) of 165 nM. (A) can be used to treat conditions where the
CC   substance related to (A) acts as autocrine or paracrine mitotic factor,
CC   e.g. malignant or benign proliferation, e.g. cancer or atherosclerosis;
CC   or disorders of gastric or pancreatic secretion or motility, e.g. to
CC   suppress secretion of amylase and to control appetite (particularly
CC   restoration of appetite in patients with cachexia). Antagonists of GRP
CC   also suppresses the release of growth hormone so can be used to slow down
CC   progression of muscular dystrophy and to treat diabetes (or associated
CC   retinopathy). The present sequence represents a peptide which is used in
CC   the exemplification of the present invention

PT   Novel modified biological peptide with increased biological potency,
PT   prolonged activity, increased half-life, for treating glucose intolerance
PT   associated or not with insulin resistance pathologies, type II diabetes.
XX
PS   Claim 5; Page 62; 77pp; English.
XX
CC   The present invention relates to modified biological peptides with
CC   increased biological potency, prolonged activity and/or increased half-
CC   life. The peptides of the invention are useful in the treatment of
CC   glucose intolerance which may be associated with insulin resistance
CC   pathologies, and in the treatment of type II diabetes. They are also
CC   useful for treating bone diseases, cancer, diseases related to
CC   inflammatory responses, obesity, autism, pervasive developmental
```

CC disorders, hyperproliferative skin diseases, hormone-dependent diseases,
CC They can be used for regulating blood glucose, enhancing mucosal
CC regeneration in patients with intestinal diseases, inhibition of
CC interleukin-8 production, stimulation of acid release, homeostasis,
CC regulation of exocrine and endocrine secretions, smooth muscle
CC contraction, feeding, blood pressure, body temperature and cell growth,
CC regulation of food intake and energy balance, and stimulation of
CC pancreatic secretion or cell growth. AAU85971-AAU86019 represent the
CC modified biological peptides of the invention

CC   -!- FUNCTION: Catalyzes the NADPH dependent reduction of L-gamma-
CC       glutamyl 5-phosphate into L-glutamate 5-semialdehyde and
CC       phosphate. The product spontaneously undergoes cyclization to form
CC       1-pyrroline-5-carboxylate.
CC   -!- CATALYTIC ACTIVITY: L-glutamate 5-semialdehyde + phosphate +
CC       NADP(+) = L-gamma-glutamyl 5-phosphate + NADPH.
CC   -!- PATHWAY: Proline biosynthesis; second step.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
CC   -!- SIMILARITY: Belongs to the gamma-glutamyl phosphate reductase
CC       family.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
